**6 years** at Símix, from support to mid-level III

**800+** pull requests merged

**650+** code reviews

**2,300+** commits shipped

**2 stores** app on Google Play and the App Store

## SUMMARY

**C# .NET** developer who started in customer support at Símix Sistemas and grew to a mid-level III role, self-taught straight from the documentation. I work from the database to the UI on a **multi-tenant SaaS platform** for time and attendance (**ABP Framework, Blazor, PostgreSQL and Azure**) and on the **.NET MAUI time-clock app** published on Google Play and the App Store. I care about performance, automated tests and automating whatever repeats. In my free time, I build the tools I use myself.

## EXPERIENCE

### Símix Sistemas — time and attendance software · Canoas, Brazil — Jan 2020 – present

Intern 2020 → QA 2021 → Implementation 2021 → Junior 2023 → Mid I 2024 → Mid II 2025 → **Mid III Aug 2026**

#### Símix Ponto Cloud, SaaS platform — Nov 2024 – present

- Full-stack work on **ABP Framework 10 / .NET 10, EF Core with PostgreSQL and Blazor**: timesheets with parallel PDF generation and e-signature receipts, payroll export, a manager panel with batch and two-step approvals, work schedules, documents, and alerts by e-mail, Teams and the app.
- **Carried out the front-end migration from Blazor Server to WebAssembly** in phases: per-page render modes, static HTTP proxies with drift tests, and trimming. The bundle went from **39 MB to 16 MB** (brotli) across 62 routes.
- Offline clock-in with a **PWA** and service worker, background jobs with **Hangfire**, real-time updates with **SignalR and Redis**, and **Azure** integrations (Blob Storage, AI Vision Face, Maps, Application Insights).
- Wrote about **70 test files** (xUnit, Shouldly, NSubstitute, bUnit and **Playwright**) that run in the deployment pipelines to Azure App Service, along with health checks.

#### Símix Ponto app · .NET MAUI — Oct 2023 – present

- The app already existed when I joined; **since 2024 I have been driving its development**, and in 2025 I redesigned the UI to match Símix Ponto Cloud. **Online and offline** clock-in with sync (SQLite), **GPS and geofencing**, **face recognition with Azure Face**, biometrics and kiosk mode.
- **Took over the iOS version**: the app only ran on Android and Windows, and I did the port, the testing and the **App Store** release.
- **Face verification** per user, in kiosk mode and also validated on the server; an **employee panel** in the app with the days of the period, adding a missing punch, timesheets, documents and signatures.

#### Reporting, calculation and legacy systems — Sep 2023 – present

- Internal **reporting and dashboard** library in Blazor (MudBlazor, SkiaSharp, Dapper) shipped as a NuGet package; cut the timesheet PDF from **1.2 MB to 80 KB** with font subsetting.
- **Took part in migrating the legacy VB6 system to .NET**: rules moved into the working-hours and payroll calculation engine in **VB.NET** (hour bank, shifts, payroll export and tax files, with automated tests) and into the Cloud platform in C#.
- Windows Service for the legacy PcPonto product in VB.NET (.NET Framework, WCF, Quartz), including cloud sync, plus **T-SQL** scripts, views and stored procedures on SQL Server.

## EXPERIENCE · BEFORE DEVELOPMENT

**Implementation and quality assurance** · deployed the system at customers with heavy SQL Server work, validated releases and tested before delivery — Feb 2021 – Aug 2023

**Support intern (L1)** · customer support, networking and setup of biometric time clocks — Jan 2020 – Jan 2021

## PERSONAL PROJECTS

### Banditboard

banditboard.suiciniv.dev ↗

Claude Code and Antigravity limits on a spare Android phone on the desk, on the iPhone, on the Apple Watch or in a widget on Windows and Mac, starring Racco, a pixel-art raccoon. Usage comes from Claude Code itself on the PC, through a hook that runs /usage, with no token on the phone; the pairing key is encrypted with **AES-256-GCM and the Android Keystore**. Open source (MIT), with GitHub releases, its own website and docs in English and Portuguese.

`Kotlin` `Jetpack Compose` `Compose Desktop` `Swift` `AES-GCM · Keystore` `Cloudflare`

### Senna

My Windows assistant: a daily dashboard and alerts when a PR needs review, a new issue, a merge, a meeting, a reminder, rain or a Claude limit. It keeps Claude Code's memory, with the decisions, the reasons and where it stopped, read back in the next session.

`C#` `.NET 10` `WinUI 3` `SQLite` `Local API`

### Toca

Site ↗

A Windows dock that replaces the taskbar, with its own tray, Start and Island, and Banditboard's Racco. Sold with a R$ 9.90 license: a signed key checked offline and Pix payments through Mercado Pago on a Cloudflare Worker.

`C#` `.NET 10` `WinUI 3` `Win32 · DWM` `Cloudflare Workers`

### ControlSensors HUD

GitHub ↗

Real-time monitoring HUD for secondary screens and PC cases: CPU, GPU, memory, storage, weather and audio, right on Windows. Open source.

`C#` `WPF` `.NET` `Hardware sensors`

## SKILLS

| | |
|---|---|
| LANGUAGES | C#, VB.NET, SQL (T-SQL and PostgreSQL), Kotlin, Swift, Python, JavaScript, HTML and CSS; reading and maintaining VB6 |
| BACKEND | .NET 7 to 10, ASP.NET Core, ABP Framework (DDD, multi-tenancy, OpenIddict), EF Core, Dapper, Hangfire, SignalR, Refit, Polly, Serilog, REST APIs, WCF |
| FRONT-END | Blazor (Server and WebAssembly, MudBlazor, Blazorise), .NET MAUI (MVVM Toolkit, SQLite, native features), PWA, WPF, WinUI 3, Jetpack Compose |
| DATA AND CLOUD | PostgreSQL, SQL Server, Redis, SQLite; Microsoft Azure (App Service, Blob Storage, AI Vision Face, Maps, SignalR, Application Insights) |
| QUALITY AND DEVOPS | xUnit, Shouldly, NSubstitute, bUnit, Playwright; GitHub Actions, Azure DevOps, Git, NuGet packages on GitHub Packages, releases to Google Play, the App Store and the Microsoft Store |
| DAY TO DAY | Code review, Blazor WebAssembly performance, PDF and Excel generation, AI-assisted development (Claude Code) |

## EDUCATION AND LANGUAGES

**Self-taught** · learned from the official documentation (Microsoft Learn) and hands-on work, focused on Clean Code, SOLID and design patterns.

**Undergraduate studies** · not completed

**Alura** · Application Security track; Network Administrator track

**Portuguese** · native

**English** · professional working proficiency; fluent reading and writing for code and documentation
