6 years	800+	650+	2,300+	2 stores
at Símix, from support to mid-level III	pull requests merged	code reviews	commits shipped	app on Google Play and the App Store

SUMMARY

C# .NET developer who started in customer support at Símix Sistemas and grew to a mid-level III role, self-taught straight from the documentation. I work from the database to the UI on a **multi-tenant SaaS platform** for time and attendance (**ABP Framework, Blazor, PostgreSQL and Azure**) and on the **.NET MAUI time-clock app** published on Google Play and the App Store. I care about performance, automated tests and automating whatever repeats, like deployments and store releases through GitHub Actions.

EXPERIENCE

Símix Sistemas — time and attendance software · Canoas, Brazil — Jan 2020 – present

Intern 2020 → QA 2021 → Implementation 2021 → Junior 2023 → Mid I 2024 → Mid II 2025 → **Mid III Aug 2026**

Símix Ponto Cloud, SaaS platform Nov 2024 – present

- Full-stack work on **ABP Framework 10 / .NET 10, EF Core with PostgreSQL and Blazor**: timesheets with parallel PDF generation and e-signature receipts, payroll export, a manager panel with batch and two-step approvals, work schedules, documents, and alerts by e-mail, Teams and the app.
- **Led the front-end migration from Blazor Server to WebAssembly** in phases: per-page render modes, static HTTP proxies with drift tests, and trimming. The bundle went from **39 MB to 16 MB** (brotli) across 62 routes.
- Offline clock-in with a **PWA** and service worker, background jobs with **Hangfire**, real-time updates with **SignalR and Redis**, and **Azure** integrations (Blob Storage, AI Vision Face, Maps, Application Insights).
- Wrote about **70 test files** (xUnit, Shouldly, NSubstitute, bUnit and **Playwright**) that run in the deployment pipelines to Azure App Service, along with health checks.

Símix Ponto app · .NET MAUI Oct 2023 – present

- **Online and offline** clock-in with sync (SQLite), **GPS and geofencing**, camera and **face recognition with Azure Face**, biometrics and kiosk mode, on Android, iOS and Windows.
- **Owned the iOS version** and its App Store release; automated releases to **Google Play, TestFlight and the Microsoft Store** through GitHub Actions, with automatic versioning.
- Wrote most of the API client the app uses (Refit, Polly), shipped as a NuGet package: sync, photo upload, pending items, documents, notifications and session renewal.

Reporting, calculation and legacy systems Sep 2023 – present

- Internal **reporting and dashboard** library in Blazor (MudBlazor, SkiaSharp, Dapper) shipped as a NuGet package; cut the timesheet PDF from **1.2 MB to 80 KB** with font subsetting.
- **Migration of the legacy VB6 system to .NET**: rules moved into the working-hours and payroll calculation engine in **VB.NET** (hour bank, shifts, payroll export and tax files, with automated tests) and into the Cloud platform in C#.
- Windows Service for the legacy PcPonto product in VB.NET (.NET Framework, WCF, Quartz), including cloud sync, plus **T-SQL** scripts, views and stored procedures on SQL Server.

EXPERIENCE · BEFORE DEVELOPMENT

Implementation and quality assurance · deployed the system at customers with heavy SQL Server work, validated releases and tested before delivery — Feb 2021 – Aug 2023

Support intern (L1) · customer support, networking and setup of biometric time clocks — Jan 2020 – Jan 2021

PERSONAL PROJECTS

Banditboard

banditboard.suiciniv.dev ↗

Claude Code usage dashboard for a spare Android phone on the desk or a widget on Windows, starring Racco, a pixel-art raccoon. The numbers come from a Claude Code hook on the PC, with no token on the phone; pairing key encrypted with **AES-256-GCM and the Android Keystore**, a PIN-protected web dashboard on the local network, limit alerts and a music mode. Open source (MIT), with GitHub releases (APK, MSI installer and portable ZIP), its own website and docs in English and Portuguese.

`Kotlin` `Jetpack Compose` `Compose Desktop` `Android` `Windows` `PowerShell` `Cloudflare Pages`

Senna

Voice assistant for my Windows desktop, in Python (about 8,000 lines): speech recognition, LLM answers (Gemini, Claude and Ollama), synthesized voice and Spotify and Microsoft integrations over OAuth 2.0, with a memory that keeps decisions across sessions.

`Python` `LLMs` `Speech-to-text` `OAuth 2.0`

ControlSensors HUD

GitHub ↗

Real-time monitoring HUD for secondary screens and PC cases: CPU, GPU, memory, storage, weather and audio, right on Windows. Open source.

SKILLS

LANGUAGES	C#, VB.NET, SQL (T-SQL and PostgreSQL), Kotlin, Python, JavaScript, HTML and CSS; reading and maintaining VB6
BACKEND	.NET 7 to 10, ASP.NET Core, ABP Framework (DDD, multi-tenancy, OpenIddict), EF Core, Dapper, Hangfire, SignalR, Refit, Polly, Serilog, REST APIs, WCF
FRONT-END	Blazor (Server and WebAssembly, MudBlazor, Blazorise), .NET MAUI (MVVM Toolkit, SQLite, native features), PWA, WPF, Jetpack Compose
DATA AND CLOUD	PostgreSQL, SQL Server, Redis, SQLite; Microsoft Azure (App Service, Blob Storage, AI Vision Face, Maps, SignalR, Application Insights)
QUALITY AND DEVOPS	xUnit, Shouldly, NSubstitute, bUnit, Playwright; GitHub Actions, Azure DevOps, Git, NuGet packages on GitHub Packages, releases to Google Play, the App Store and the Microsoft Store
DAY TO DAY	Code review, Blazor WebAssembly performance, PDF and Excel generation, AI-assisted development (Claude Code)

EDUCATION AND LANGUAGES

Self-taught · learned from the official documentation (Microsoft Learn) and hands-on work, focused on Clean Code, SOLID and design patterns.

Undergraduate studies · not completed

Alura · Application Security track; Network Administrator track

Portuguese · native

English · professional working proficiency; fluent reading and writing for code and documentation
